Invoice and Payment Method Migration

What Gets Migrated

When a billing profile migrates to the new billing platform, the following invoice and payment data moves with it:

- All invoice PDFs issued in the last 24 months.
- Saved payment methods that passed re-verification.
- Auto-pay settings, including the auto-pay payment method.
- Billing address and tax identification information.

Invoices older than 24 months are archived but not migrated. Archived invoices remain downloadable from the legacy billing portal for 12 months after migration.

Payment Method Errors During Migration

Error code	Cause	Fix
ERR-4040	The legacy payment method on file could not be re-verified with the card network	Add a new payment method and set it as default before retrying migration
ERR-4210	The saved payment method uses a card network no longer supported on the new billing platform	Replace the payment method with a supported card or bank transfer method
ERR-4310	Auto-pay could not be re-enabled because the associated payment method failed migration	Re-enable auto-pay manually after adding a working payment method

Auto-Pay Behavior After Migration

Auto-pay is paused automatically during migration and does not resume until the account owner confirms the new default payment method. This is intentional, to prevent a charge attempt against a payment method that failed re-verification.

Invoice Numbering

Invoice numbers issued before migration keep their original format. Invoice numbers issued after migration follow the new billing platform's numbering scheme. Both formats remain valid for accounting and tax purposes.
