Admin Roles and Permissions During Migration

Who Can Initiate or Confirm Migration

Only users with the **Billing Administrator** role can confirm a migration that requires manual action. The **Account Owner** role can always confirm migration, even if they do not also hold the Billing Administrator role.

Standard **Member** roles cannot see the migration banner and cannot confirm migration, even if they have access to billing history.

Role Permission Table

Role	Can view migration status	Can confirm migration	Can retry after an error
Account Owner	Yes	Yes	Yes

Billing Administrator	Yes	Yes	Yes
Finance Viewer	Yes	No	No
Member	No	No	No

Adding a Billing Administrator During Migration

Billing Administrator role changes made while a migration is in progress take effect immediately and do not restart or interrupt the migration. This is different from role changes to auto-pay settings, which are paused until migration completes.

Multiple Billing Contacts

If an account has more than one billing contact, migration requires confirmation from only one Billing Administrator or the Account Owner — not all contacts. Once confirmed, the migration proceeds for the entire account, and all billing contacts receive a completion notification.
