Soft Suave
The smart way...

Essvaran S

Full Stack .NET Developer

SUMMARY:

- Experienced **Full Stack .NET Developer with 5+ years** of expertise in designing, developing, and supporting enterprise-grade web applications and cloud-based solutions using Microsoft technologies. Strong background in building scalable backend systems with C#, .NET Core, and modern architectural patterns, along with hands-on exposure to frontend development and UI enhancements.
- Proficient in developing RESTful APIs, microservices, and event-driven applications using .NET Core, Azure Functions, CQRS, MediatR, and Ocelot API Gateway. Experienced in implementing clean and maintainable architectures with SOLID principles, Dependency Injection, Repository Pattern, and Unit of Work.
- Hands-on experience working with Azure services including Azure Functions, Event Hub, Azure Blob Storage, Cosmos DB, Azure SQL Database, App Insights, App Registration, and Entra ID for building secure and scalable cloud-native applications.
- Strong knowledge of data access and database optimization using Entity Framework Core, Dapper, SQL Server, Cosmos DB, and MongoDB. Skilled in designing efficient queries, handling large datasets, and improving application performance through optimized data access strategies.
- Worked on authentication and authorization mechanisms using JWT, OAuth2, Microsoft Entra ID, and Microsoft Graph API integrations for secure enterprise application access and user management.
- Experienced in implementing centralized logging, exception handling, monitoring, and diagnostics using middleware pipelines and Azure Application Insights to improve application reliability and observability.
- Contributed to frontend development and UI modernization using HTML, CSS, JavaScript, TypeScript, Blazor, React, and Telerik UI components to build responsive and user-friendly interfaces.
- Good understanding of SDLC, Agile methodologies, Git-based workflows, code reviews, deployment processes, and production support activities across multiple client engagements.
- Involved in requirement analysis, technical discussions, effort estimation, and cross-team collaboration while delivering enhancements, bug fixes, and production support in agile development environments.

RESPONSIBILITIES:

- Developing and maintaining enterprise web applications across backend, frontend, database, and cloud integration layers.
- Designing and implementing RESTful APIs, reusable services, and scalable backend modules using .NET Core, NestJS, Entity Framework Core, and MongoDB.
- Implementing modular and maintainable architectures using CQRS, Repository Pattern, Unit of Work, and Clean Architecture principles.
- Building and integrating microservices and micro frontend-based applications to support scalable and distributed systems.
- Optimizing SQL queries, Stored Procedures, Cosmos DB queries, and MongoDB operations to improve application performance and data retrieval efficiency.
- Designing Cosmos DB schema structures and developing reusable query builder mechanisms for dynamic querying requirements.
- Implementing authentication and authorization mechanisms using Microsoft Entra ID, MSAL, JWT, OAuth2, and Microsoft Graph API integrations.
- Creating centralized event bus services using RxJS to enable communication between micro frontend applications.
- Integrating Azure services such as Azure Blob Storage, Azure Application Insights, Azure Key Vault, Cosmos DB, and Event Hub for secure and scalable cloud solutions.
- Implementing automated email notification workflows and background job processing for asynchronous operations and large-scale report exports.
- Performing frontend feature enhancements and UI bug fixes using Blazor, React, TypeScript, Bootstrap, Tailwind CSS, and Telerik UI components.
- Implementing centralized logging, exception handling, and monitoring mechanisms to improve application reliability and observability.
- Collaborating with business stakeholders and cross-functional teams for requirement analysis, sprint planning, technical discussions, and solution delivery using Agile methodologies.
- Participating in code reviews, deployment activities, production support, and technical documentation to ensure application maintainability and scalability.

TECHNICAL SKILLS:

Frontend Technologies: Blazor, React, Angular, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, Tailwind CSS, Telerik UI, jQuery, AJAX, Responsive Web Design

Backend Technologies: C#, .NET, .NET Core, ASP.NET Core, ASP.NET Web API, ASP.NET MVC, Azure Functions, Entity Framework Core, Dapper, ADO.NET, RESTful APIs, HTTP Client, CQRS (MediatR), Ocelot API Gateway

Cloud & Azure Services: Microsoft Azure, Azure Functions, Azure Blob Storage, Azure Cosmos DB, Azure SQL Database, Azure Event Hub, Azure App Insights, Azure App Registration, Entra ID

Databases: Microsoft SQL Server, Cosmos DB, MongoDB

Architecture & Design Patterns: Microservices Architecture, Monolithic Architecture, Layered Architecture, Clean Architecture, MVC, OOP, SOLID Principles, Repository Pattern, Unit of Work, CQRS

Authentication & Integrations: JWT Authentication, OAuth2, Microsoft Graph API, Role-Based Access Control (RBAC), Secure API Integration

Logging & Monitoring: Centralized Logging, Exception Handling Middleware, Azure Application Insights, API Monitoring, Error Handling Strategies

Testing & API Tools: xUnit, NUnit, Moq, Integration Testing, Postman, API Testing

DevOps & Version Control: Git, GitHub, Azure DevOps, CI/CD Pipelines, Docker, Containerization

Development Tools: Visual Studio 2019/2022, VS Code, SQL Server Management Studio (SSMS), MongoDB Compass, Postman

Project Management & Collaboration: Azure DevOps Boards, Jira, Agile/Scrum Methodology, Microsoft Teams, Slack, Outlook

RECENT PROFESSIONAL EXPERIENCE:

Project Name: Digital Gateway

Technologies: C#, .NET 8, ASP.NET Core Web API, Entity Framework Core, Azure Cosmos DB, Microsoft Entra ID, Azure Key Vault, Azure Application Insights, Angular 19, TypeScript, Native Federation (Micro Frontend Architecture)

Team Size: 9

Project Management Tool: Azure Devops

Description:

- Digital Gateway is an enterprise web platform designed as a centralized access hub for multiple KPMG applications such as KPMG Clara, Audit News, Thought Leadership, and other internal business applications.
- The platform delivers a personalized and configurable user experience based on user personas and role-based access configured by administrators.
- Administrators can manage layout configurations, application accessibility, and UI arrangements for different personas, while end users can customize widget positioning, resize layouts, and provide feedback on the configured experience.
- The application is built using Micro Frontend (MFE) architecture with Native Federation to enable independent deployment and seamless integration of multiple remote applications within a unified gateway experience.

Responsibilities:

- Contributed as a Full Stack Developer across frontend, backend, cloud integration, and application architecture components.
- Participated in the initial project setup and application scaffolding for both backend services and Angular-based micro frontend modules.
- Gathered business requirements and designed the complete Cosmos DB schema structure for handling persona configurations, layouts, widgets, user preferences, and application mappings.

- Developed reusable repository and data access layers for Cosmos DB with custom query builder implementations to support dynamic and optimized querying capabilities.
- Implemented Single Sign-On (SSO) authentication using MSAL and Microsoft Entra ID for secure access across multiple integrated applications.
- Developed custom session timeout and user inactivity handling mechanisms to improve application security and session management.
- Designed and implemented a centralized event bus service using RxJS to enable communication and state synchronization between multiple micro frontend applications.
- Integrated Azure services including Azure Key Vault and Azure Application Insights for secure configuration management, monitoring, diagnostics, and logging.
- Worked on dynamic role/persona-based UI rendering and access control mechanisms based on administrator configurations.
- Collaborated with cross-functional teams in Agile development cycles using Azure DevOps for sprint planning, task tracking, code reviews, and deployments.

Project Name: EIOS Service Desk

Technologies: .NET 8, Azure Functions, Blazor, Entity Framework Core, and Triggers.

Team Size: 2

Project Management Tool: Azure Devops

Description:

- Worked on the EOIS Service Desk application, a cloud-based ticket management system built on Microsoft Azure using C#, ASP.NET Core, Blazor, and Azure Functions.
- The application enables users to create, manage, and track support tickets integrated with Azure DevOps (ADO) using ADO rest apis. Users can raise tickets for themselves or on behalf of other users, with an approval-based workflow for delegated ticket creation.
- It supports ticket lifecycle management, including ticket creation, status updates, comments, notifications, and workflow-driven communication through automated email triggers.
- The solution leverages Azure serverless and event-driven architecture for scalable processing, external integrations, and real-time operations.

Responsibilities:

- Developed and maintained backend processing logic using Azure Functions for handling business workflows, ticket operations, and system integrations
- Built interactive frontend components using Blazor for ticket creation, status tracking, comments, and user interactions
- Implemented serverless and event-driven processing using Azure Functions with multiple trigger types for real-time and scheduled operations
- Integrated the application with Azure DevOps (ADO) for automated ticket creation, tracking, and lifecycle management
- Developed approval-based workflows for on-behalf ticket creation with email acknowledgment and validation process
- Enabled ticket collaboration features including comments, status updates, and automated email notifications to respective users

Project Name: GeoSamplePro

Technologies: .NET 6, SQL Server 7.0, Entity Framework, Azure Blob Storage, Microsoft Graph API, React, Zustand, Axios, Tailwind CSS

Team Size: 10

Project Management Tool: Azure Devops

Description:

- GeoSamplePro is a Geological Sample Management System developed for managing and tracking geological core samples stored across Stratum Reservoir facilities worldwide.
- The platform enables customers to store, manage, transport, ship, and share geological samples across multiple warehouse and laboratory locations. Some facilities provide storage capabilities, while others offer laboratory environments where customers can perform research and testing activities on samples through a time-based usage model.
- The application organizes geological assets using a hierarchical container structure like rooms, shelves, boxes, and bottles, where each level is represented as a container entity within the system.
- The platform also provides dashboard and reporting capabilities with graphical visualizations to help users monitor sample availability, storage distribution, and location-based insights based on their access permissions.

Responsibilities:

- Worked primarily as a Backend Developer contributing to the Container Management and Sample Management modules.
- Developed and maintained RESTful APIs using .NET 6 and Entity Framework Core for handling sample operations, container hierarchy management, and storage workflows.
- Designed and implemented complex Stored Procedures, SQL Views, and optimized SQL queries for efficient data retrieval and reporting functionalities.
- Performed query optimization and database performance tuning to improve execution time and application responsiveness for large sample datasets.

- Implemented business logic for container-based sample organization across room, shelf, box, and bottle hierarchies.
- Contributed to dashboard data processing and reporting functionalities used for graphical visualization and sample tracking insights.
- Integrated Azure Blob Storage for secure handling and storage of sample-related documents and files.
- Worked with Microsoft Graph API for user-related operations and access management integration.
- Performed frontend bug fixes and minor UI enhancements using Zustand, Axios, and Tailwind CSS.
- Collaborated with cross-functional teams in Agile development cycles using Azure DevOps for sprint tracking, code reviews, and deployment activities.
